

CUTTING ENERGY USE ON THE ROAD BY 20% – tips to get you started
For better health and a cleaner environment.

Tips to reduce energy use on the road

Reduce vehicle emissions:

- Keep your tires properly inflated; check your tire pressure at least twice a month and add air when needed
- Keep your engine properly tuned
- Take your time speeding up and slowing down
- Choose an energy-efficient vehicle; larger cars and engines often burn more fuel and cost more money to run
- Limit the amount you idle your engine – it wastes gas and creates air pollution

Reduce vehicle use:

- Carpool – share a ride to work, school or to events
- Use public transit – take the bus, streetcar, subway or GO Train
- Walk and bike – use your legs for great exercise
- Telework – work from home even once a month and make a difference
- Trip chain – combine errands into one journey rather than making several separate car trips
